Car Rental Fleet Manager — Part 2

Module 5: Strings, Library Algorithms & File I/O
This part manages the car list, searches by model name, sorts the fleet, and saves records to a text file.

Code for this part

```
// FleetManager.java — PART 2 (Module 5)
// Save this file as FleetManager.java

import java.io.*;
import java.util.*;

public class FleetManager {
    private ArrayList<Car> cars = new ArrayList<>();

    public void addCar(Car car) {
        cars.add(car);
    }

    public List<Car> getCars() {
        return cars;
    }

    public void showCars() {
        for (Car car : cars)
            System.out.println(car);
    }

    public void searchCar(String name) {
        boolean found = false;
        for (Car car : cars) {
            if (car.getModel().toLowerCase()
                   .contains(name.toLowerCase())) {
                System.out.println("Found: " + car);
                found = true;
            }
        }
        if (!found)
            System.out.println("Car not found");
    }

    public void sortCars() {
        cars.sort(Comparator.comparing(Car::getModel));
    }

    public void saveCars() {
        try (PrintWriter out = new PrintWriter("fleet.txt")) {
            for (Car car : cars)
                out.println(car.getModel() + "," + car.getDailyRate());
            System.out.println("Fleet saved to fleet.txt");
        } catch (IOException e) {
            System.out.println("File error: " + e.getMessage());
        }
    }
}
```

Save as: `FleetManager.java`. This code depends on `Car.java` from Part 1.
